<p>In the last recent years we are have been facing a really big problem called “Global Warming” because the humanity was not so very carefull careful with the planet Earth. Global warming has many bad effects and it is always an international environment environmental problem that people want to solve. With the growing of earth’s population, global warming has become more serious than ever. The citizens can reduce the effects of global warming if they recycle the material products like made of paper, glass, etc. If we will recycle the rubbish more than ever before, we will get have a better future. I could can do many things, like such as recycling, in order to help the environment. At home I will seperate separate the trash into many categories. For for example, papers paper, bottles glass, and other garbages garbage. So many people do not recycle or and they just through throw the rubbish in the nature on the ground. Papers could be reuse reused after in the processs of paper factories, and bottles could be reuse reused after in the processs of factories too. It might save a lot of materials like woods wood and plastics plastic.</p> <p>Also Additionally, the northpole North Pole is melting away, not completely, but pieces of it are. Not only There are not just the icebears polar bears who need a place to life live, but we also need a clean and nice place to life live.</p> <p>Also Furthermore, the Earth is very poluted polluted because of the impact overuse of fossil fuels like oil, gas and coal. On the other hand However, I could ride my bicycle instead of taking a car. If many people ride rode the bike bikes instead of drive driving themselves, the CO2 CO2 emissions emissions might desend descend. Another things should to be aware of are is that the fossil fuels, it will become empty be used up some day if we don’t find begin using the substitute energy. Global warming has many bad effects and it always an international environment problem that people want to solve. With the growing of earth population, global warming has become serious than ever. The citizens can reduce the effects of global warming if they recycle the material products like paper, glass, etc. If we will recycle the rubbish more than ever before we will get a better future. I could do many things like recycling. At home I will seperate the trash into many categories. For example, papers, bottles, and garbages. So many people do not recycle or just through the rubbish in the nature. Papers could reuse after the process of paper factories, bottles could reuse after the process of factories too. It might save a lot of materials like woods and plastics. Also, the northpole melt away not completely but pieces of it. There are not just the icebears who need a place to life we also need a clean and nice place to life. Also, the Earth is very poluted because of the impact of fossil fuels like oil, gas and coal. On the other hand, I could ride my bicycle instead of taking car. If many people ride the bike instead of drive themselves, the CO2 emessions might desend. Another things should be aware of are the fossil fuels, it will become empty some day if we don’t find the substitute energy. Most of the people become really comfortable and (they forget to use the bikes) not careful with the environment. They forget the oxygen is an important resource for life and they continue to cut the forests. We However, these things have an influence on us. When the oil get fewer, the price get higher. Customers might to pay more on many things and some people might not afford it. We all need to be better friends to our world and nature. We should start to pay more attention to the Earth needs if we want to live in a safe-way. To sum up, helping reduce the effects of global warming is not</p>

really comfortable, and (they forget to use the bikes) and they're not careful with the environment. They forget the that oxygen is an important resource for life and they continue to cut down the forests. We However, these things have an influence impact on us. When the supply of oil get fewer is reduced, the price get gets higher. Customers might have to pay more on for many things and some people might not be able to afford it. We all need to be better friends to our world and nature. We should start to pay paying more attention to the Earth's needs if we want to live in a safe way safely. To sum up, helping reduce the effects of global warming is not only good for yourself but the for every one everyone and for our home planet Earth.

only good for yourself but the every one and our home planet Earth.
