

FINAL CORRECTED TEXT

In recent years we have been facing a really big problem called “Global Warming” because humanity has not been very careful with the planet Earth. Global warming has had many bad effects and it is always an international environmental problem that people want to solve. With the earth’s growing population, global warming has become more serious than ever. The citizens can reduce the effects of global warming if they recycle products made of paper, glass, etc. If we recycle rubbish more than we ever have before, we will have a better future. I can do many things, such as recycling, in order to help the environment. At home I separate the trash into many categories, for example, paper, glass, and other garbage. So many people do not recycle and they just throw rubbish on the ground. Papers could be reused in the processes of paper factories, and bottles could be reused in the processes of factories too. It might save a lot of materials like wood and plastic.

Additionally, the North Pole is melting away, not completely, but pieces of it are. Not only polar bears need a place to live, but we also need a clean and nice place to live.

Furthermore, the Earth is very polluted because of the overuse of fossil fuels like oil, gas and coal. However, I could ride my bicycle instead of taking a car. If many people rode bikes instead of driving themselves, the CO₂ emissions might be reduced. Another thing to be aware of is that fossil fuels will be used up some day if we don’t begin using alternative energy. Most people become really comfortable, (they forget to use the bikes) and they’re not careful with the environment. They forget that oxygen is an important resource for life and they continue to cut down the forests. However, these things have an impact on us. When the supply of oil is reduced, the price gets higher. Customers might have to pay more for many things and some people might not be able to afford it. We all need to be better friends to our world and nature. We should start paying more attention to the Earth’s needs if we want to live safely. To sum up, helping reduce the effects of global warming is not only good for yourself but for everyone and for our home planet Earth.
